Catalyzes the production of HC-toxin: a cyclic tetrapeptide. Activates and thioesterifies L-Pro, and epimerizes it to D-Pro; also uses D-Ala as a substrate but this is epimerize.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      FUNCTION: Non-ribosomal peptide synthetase,

It is produced through between the Swiss Institute of Bioinformatics and the Entropean Bioinformatics Institute. There are no restitute the European Bioinformatics Institute.
                                                                                                                                                                                         -!- ALTERNATIVE PRODUCTS: 2 ISOFORMS; PL-VDAC1 (SHOWN HERE) AND MT-VDAC1; ARE PRODUCED BY ALTERNATIVE SPLICING.
-!- TISSUE SPECIFICITY: HIGH LEVELS OF EXPRESSION DETECTED IN HEART,
KIDNEY, BRAIN, AND SKELETAL MUSCLE. NOT EXPRESSED IN TESTIS.
-!- DOMAIN: CONSISTS MAINLY OF MEMBRANE-SPANNING SIDED BETA-SHEETS.
-!- SIMILARITY: BELONGS TO THE EUKARYOTIC MITOCHONDRIAL PORIN FAMILY.
